RAG CHUNKABLE TEXT CORPUS: DOC 01

CSA High-Performance & Technical Structure (2020–2026)

Official administrative reorganization, dual-coaching mandate, and national team strategic oversight.

Document Identifier: CSA-HP-GOV-2020-2026 | **Vector Target:** Entity extraction for management, coaching hires, selection panels, and Director of Cricket mandates post-Mark Boucher.

1. Split-Coaching Framework Implementation

In January 2023, Cricket South Africa formally abolished the unified head-coach structure. Following independent governance recommendations by Director of Cricket Enoch Nkwe, CSA separated red-ball and white-ball operations into independent technical units to mitigate player burnout and manage conflicting global franchise schedules.

Appointed Role	Personnel	Format	Strategic Directives
Red-Ball Head Coach	Shukri Conrad	Test Match	WTC cycle rebuild; middle-order transition; domestic first-class scouting.
White-Ball Head Coach	Rob Walter	ODI & T20I	High boundary percentage; death-overs execution; leading 2023/2024 WC squads.
White-Ball Batting Coach	JP Duminy	ODI & T20I	Middle-overs spin acceleration; boundary strike rates in overs 11–40.
Senior Assistant Coach	Wandile Gwavu	White-Ball	Fielding conversion efficiency and tactical boundary-rope containment.
Director of Cricket	Enoch Nkwe	All Formats	National contracts; SA20 alignment; racial transformation benchmarks.

2. High-Performance Pathway & National Selection Directives

The high-performance pipeline operates on a three-tier model: Division 2 provincial cricket feeds into Division 1, which directly integrates with the Betway SA20 franchise window. The national selection committee operates without a standalone convenor of selectors; instead, format head coaches hold direct selection accountability alongside Director of Cricket Enoch Nkwe.

Fast-bowling workloads are regulated by a central medical registry under the CSA High Performance Centre in Pretoria. Bowlers on national retainers must adhere to strict delivery thresholds between bilateral series and franchise leagues to ensure fitness for multi-match ICC events.

3. Central Contract Hierarchy (2024–2026 Cycles)

Centrally contracted players are categorized into Tier 1 (all-format retainers), Tier 2 (format specialists), and Developmental / Incremental contracts for emerging international talent. National contracts require mandatory availability for bilateral tours and ICC tournaments.

Player Name	Contract Tier	Primary Format	Strategic Tactical Function
Temba Bavuma	Tier 1 (National)	Test (C) / ODI	Test match captaincy; anchor bat against the swinging new ball.
Aiden Markram	Tier 1 (National)	T20I (C) / All	White-ball captain; top-order accelerator; powerplay off-spinner.
Kagiso Rabada	Tier 1 (National)	All Formats	Primary pace spearhead; high strike-rate across all match phases.
Marco Jansen	Tier 1 (National)	All Formats	Left-arm tall seam; bounce specialist; lower-order boundary hitter.
Heinrich Klaasen	Tier 2 (Specialist)	T20I / ODI	World-class middle-overs boundary striker; spin counter-attacker.
Kwena Maphaka	Developmental	Emerging (All)	Rapid left-arm pace; fast-tracked from U19 World Cup to senior squad.

4. Transformation Targets & Social Justice Governance

Following the 2021 Social Justice and Nation-Building (SJN) Commission findings by Adv. Dumisa Ntsebeza SC, CSA codified national demographic targets across seasonal cycles. National teams target an average representation of six players of color per playing XI across a competitive year, including a minimum of two Black African players.

> **RAG Evaluation Ground Truth Note:** National targets apply as a rolling average over the course of a competitive season rather than an absolute rigid quota per single match. This gives coaches operational tactical freedom to adapt playing XIs to specific pitch, moisture, and spin conditions while ensuring equitable representation over time.
